Help Protect Our Information Assets - Design Cyber Security Awareness Infographics in Chinese

VIRTUAL STUDENT FOREIGN SERVICE

VSFS

Project Title	Help Protect Our Information Assets - Design Cyber Security Awareness Infographics in Chinese
Project Summary	Design cyber security awareness infographics in Mandarin and/or Cantonese for the local employed staff working at the U.S. Consulate in Hong Kong.
Country	China
Agency	Department of State
DoS Office	N/A
Post	HONG KONG
Section	IM
Number of Interns	2

Project Description

The Dept of State networks are constantly under attack by hostile actors. Cyber security awareness is essential in helping protect our valuable information. Locally employed staff who work at the consulate are central to helping us in this effort. One such method we can employ to further enhance cyber security awareness is through the use of tailored infographics. We are looking for one page infographics that capture the attention of the local staff, leaving a impression of the importance of practicing good cyber security habits through the use of imagery, culture and local language. The infographics should target both workplace, home and mobile environments. The designs will be distributed in physical spaces as well as electronically -email, mobile devices, newsletters.
